# Neuro-MDM for malignant brain tumours

Neuroscience

Patient information

**We would like to introduce the Multidisciplinary Team for primary brain tumours at Royal Sussex County Hospital (RSCH).**

## **Who is in the Multidisciplinary Team?**

The Multidisciplinary team consists of doctors, nurses and other healthcare professionals, who have specialist training and experience in the diagnosis, care and treatment of patients with brain tumours. We meet weekly to discuss individual patient treatment and care.

**We have listed below some of the people that are in the team caring for you.**

Neurosurgeon: MDT lead clinician	Mr Giles Critchley
Clinical oncologists:	Dr Juliet Brock and Dr Edward Chandy
Macmillan neuro-oncology nurse specialists:	Katie Wright & Ruth Smith Telephone: 01444 441881 Ext. 68466 Email: uhsussex.neuro.oncology.nurses@nhs.net
Radiology:	Dr Catriona Good

## **How does the team support my care?**

We work closely together to plan and deliver the most effective treatment and support for each individual patient. This is done in consultation with the patient and his/her family, and occurs at each stage of their care.

If there is anything about your care and treatment that you do not understand please don't be afraid to ask. We are all here to help.

## Where will I have my treatment?

Any surgery is done at Royal Sussex County Hospital and will require a stay on the surgical ward there.

Depending on the type of brain tumour, you may receive one or a combination of treatments. These can include surgery, radiotherapy (x-ray treatment) and/or chemotherapy (drug treatment). If you need radiotherapy and/or chemotherapy your treatment will likely be based at the Sussex Cancer Centre at the Royal Sussex County Hospital, Brighton. This treatment is given as an outpatient.

You will see your oncologist during your treatment and/or follow-up.

## Neuro-oncology appointments

We will do our very best to see you promptly. However, owing to the often complex nature of brain/spinal tumours, it is sometimes necessary to give a patient extra time over and above that which has been allocated. This can mean the clinics are sometimes delayed. We are grateful for your patience and understanding, and please be assured that we will always give you the time you need when you attend for your clinic appointment or treatment planning.

## Clinical trials

RSCH is a teaching hospital and conducts research studies, which compare new or different treatments with existing ones. If you are asked to join a clinical trial, you are free to choose whether or not to take part in it. The Clinical Nurse Specialists and specially trained research nurses will provide you with the information you need to make that decision.

Information regarding your diagnosis is added to a national brain tumour database to be used in future research. Please ask if you would like to know more.

# Patient information

You will be provided with information booklets and leaflets by your Nurse Specialist. If at any time you require further information please do not hesitate to ask us.

## Someone to talk to:

The diagnosis and subsequent treatment/s of a brain tumour often have a major emotional effect on a person. Your Clinical Nurse Specialist (who is also known as your key worker) is here to provide supportive care, advice and information about your particular type of tumour.

Here are some further organisations and people that you may find it helpful to talk to.
