

Welcome to the Park Centre for Breast Care

You will be greeted by the receptionist who will ask you to take a seat.

You will be called by a nurse.

She will take you to see a doctor.

The doctor may carry out some investigations
- this could include a mammogram,
an ultrasound and an examination.

The doctor may also do a small needle test
of your breast or armpit.

The results sometimes take a few weeks to come back, so you may be booked for another appointment.

If you do have another appointment you will see the doctor and the nurse.
