# Patient Initiated Follow Up (PIFU)

Information and advice for patients  
With long term neurological  
conditions

## Following your outpatient appointment

We have changed the way we provide your care as an outpatient. Instead of having regular, routine appointments according to a timetable, we'll support you to manage your own care and to contact us only if you have worries or concerns. This is called Patient Initiated Follow Up (PIFU).

This leaflet explains how you can access support and advice about your health. If you have concerns or questions that are not answered in this leaflet, please speak to your healthcare professional.

## How does my Patient Initiated Follow Up (PIFU) work?

You will have 'open access' to the clinic for an agreed period from the date of your outpatient appointment. If you are worried you have further problems related to your original appointment during this time, contact us and a clinician will review your request and offer you a further intervention if appropriate.

If you have problems after this time, please contact your GP.

## Why am I being offered Patient Initiated Follow Up (PIFU)?

The reason we offer follow-up this way is because we want to give you more choice and flexibility and reduce unwanted and unnecessary visits to the hospital. This will help improve patient experience, reduce cost of travel and parking, and reduce waiting times for appointments.

## When can I book an appointment?

### You can make a follow up appointment if:

- You have on-going concerns about your condition;
- If your condition changes significantly beyond that expected
- If you require further information or clinical input that cannot be met by support organisations or your GP or local services.

We want to empower you to contact us when you need us

## How can I book an appointment?

Call our Neurology Secretaries:

Worthing and Southlands Hospitals- 01903 286795

St Richards Hospital- 01243 831604

A member of your clinical team will review your request. They may be able to offer you advice and guidance or decide that you need an appointment. Appointments may be virtual via telephone, video or face to face if we need to physically examine you.

We will send you a confirmation of your appointment.

## When should I contact the service?

- If you have an increase in seizure frequency or severity
- If you have concerns about treatment side effects or dosage
- If you have been symptom or seizure free for a significant time and wish to discuss coming off medication
- If you need to discuss something relating to your condition such as pregnancy, driving, employment or travel.
- For patients with long term neurological conditions; if you have a change in your function or ability that you need to discuss.

## When is a Patient Initiated Follow Up (PIFU) appointment not appropriate?

PIFU is not appropriate for conditions or symptoms unrelated to the condition you were seen for originally: for these you will need to contact your GP or NHS111 for advice.

**If you require urgent medical attention, you should contact your GP, NHS 111 or attend A&E if you are really unwell.**

## Frequently asked questions

### Q. How long will I have to wait for an appointment?

A. The service will contact you within 1 week to discuss a plan.

### Q. Could I get lost in the system?

A. No. You will be clearly recorded as being on Patient Initiated Follow Up pathway on our internal systems. If you do not need to see the clinician within the agreed timeframe at your last appointment, you will be discharged back to your GP who will refer you back to us if you need hospital care again in the future.

### Q. Why have you set an end date for me to make an appointment?

A. Your clinician will decide how long you need to be on the PIFU pathway. It will depend on your condition and their clinical judgement of how long you will need before you can be discharged back to your GP. Our aim is to discharge you once you are well enough.
